

Metabolic Code Practitioner Testimonial

Metabolic Code is a cloud-based personalized health platform, designed to help clinicians improve healthcare outcomes and empower patients to improve the quality of their health. Our unique position on delivering evidence-based tools to support practitioners' abilities to assess and interpret patient data, and recommend proven integrative protocols to their patients while dramatically increasing their patients' adherence and engagement levels has shown itself to be a great asset to practitioners nationwide.

"After using the Metabolic Code Health and Vitality Assessment Report with my patients, I would dread having to practice without it. The Report allows me to remain more organized and efficient during a consultation by prioritizing a patient's metabolic derangements. We know the importance of nutrition, but many people are not getting optimal benefits due to other organ system imbalances. With the Metabolic Code Report, I can optimize my time with the patient and help them understand the relationship between organ systems and their symptom complex. Patients see how their symptoms relate to lab values giving credibility to the recommended treatment plans. When completing the Metabolic Code consultation, the patient has a clear and detailed understanding of why they feel the way they do. The Metabolic Code Health and Vitality Assessment Report also provides professional-grade supplement suggestions that I may not have initially considered, but will now review and offer my patient a broad treatment complex which will produce the best outcome for my patients."
